Subscription Strategy

Setting up the difference between source and copied trades

Volume scaling *

Multiply

Autoscale - The ratio of a copy's volume to the original volume is equal to the ratio of the follower's and provider's *Compared values*. The result is then multiplied by the *Ratio multiplier*. The final copied lots must reflect the actual executed results, which may be subject to high market fluctuations. Followers are strongly advised to exercise caution when selecting this mode.
Multiply - A copy's volume is equal to the provider's original volume multiplied by the *Volume multiplier*.
Fixed - Copies' volumes are always equal to the specified *Copies' volumes*.

Volume multiplier *

1

Number to multiply the provider's volume by for a copy

Small volumes handling *

Skip low volumes

If the copied lot size is smaller than the minimum lot size for the symbol.
Skip low volumes - The trade will not be copied.
Risk by rounding to min lot - An order will be opened with the symbol's minimum lot size.
